

Helpful Hints from the Hackers

1. Never plant in muddy soil. The soil gets hard and compacted around the roots.
2. Never put fertilizer directly in the hole when planting. It can burn the roots.
3. Water hanging baskets at least once a day and fertilize every 2 weeks.
4. Pinch petuniasto keep them bushy.
5. The best time to water is in the morning.
6. Removing dead flowers will encourage plants to bloom.
7. Replace all or at least part of old soil in pots.
8. The temperature on the ground is at least 5 degrees colder than air temperature. So you can still have frost when the temperature is above 32 degrees.
